

# AURORA UNIVERSITY

## WHO WE ARE

Aurora University offers educational degree programs to approximately 4,900 degree-seeking students a year on its campuses. The university prepares students for many professions some of which include accounting, environmental science, business administration, education, nursing, criminal justice, social work, communications and athletic training.

## HOW WE SUPPORT THE JOHN C. DUNHAM STEM PARTNERSHIP SCHOOL

Aurora University believes it should serve its community which is why we work so hard to support the John C. Dunham STEM Partnership School. The University supports the school financially and through the time of mathematics and science faculty. Our university faculty work in classrooms and laboratories to support teachers and students as they explore essential questions to advance their STEM content knowledge.

## HOW WE USE STEM AT AURORA UNIVERSITY

Besides teaching STEM concepts in many classes, STEM fields are used to operate the university. For example, mathematics is very important in our budget management. Technology is used throughout the university for tasks such as scheduling classes, developing communication materials and monitoring building operations.
