

Waste Management

WHO WE ARE

Waste Management .based in Houston, TX, is the leading provider of comprehensive waste management and environmental services in North America. Waste Management partners with its customers to use our knowledge and experience leading to new sustainable solutions.

HOW WE SUPPORT THE JOHN C. DUNHAM STEM PARTNERSHIP SCHOOL

Since 2011, Waste Management's engineers participated with the John C . Dunham STEM Partnership School's staff and teachers in a working laboratory to help pioneer educational protocol. Waste Management developed and donated a display for the school with a three dimensional model of a landfill and gas-to-energy facility. The display is a format for teaching the basic principles of fluid mechanics to grade school children.

HOW WE USE STEM AT WASTE MANAGEMENT

Waste Management engineers and technicians design, develop, and operate over 300 recycling and disposal facilities throughout North America. The company is a leader in the development of renewable energy from landfill wastes for commercial and residential use, as well as for fuel in our compressed natural gas truck fleet.
